

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. In compliance with this law, electric utilities and suppliers provide an Environmental Disclosure Statement for the 12 months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between July 1, 2007 and June 30, 2008.

At least 58 percent of the electricity that ComEd delivers is nuclear power, 4 percent is natural gas-fired power, and both wind power and hydro power are nearly 1 percent each. All of these sources have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation.

For comparison purposes, the following shows the PJM Interconnection⁽¹⁾ system mix averages for sources of electricity generation and emissions for the 12 months ending June 2008.⁽²⁾

(PJM System Mix. Sources–rounded to the nearest whole percent)

| | |
|-------------------------|-----|
| Coal-fired power | 56% |
| Hydro power | 1% |
| Natural gas-fired power | 7% |
| Nuclear power | 34% |
| All others | 2% |

(PJM System Mix Emissions– pounds per 1000 kilowatt-hours)

| | |
|-----------------|---------------|
| Carbon dioxide | 1,247.48 lbs. |
| Nitrogen oxides | 2.17 lbs. |
| Sulfur dioxide | 7.68 lbs. |

• (1) PJM Interconnection (www.pjm.com) is a regional transmission organization. It maintains the safety, reliability, and security of the transmission system and operates an efficient and effective wholesale electric market in 13 states and the District of Columbia. ComEd's electric service territory is within the PJM footprint. The PJM Interconnection system is the primary source of supply for ComEd.

• (2) The data source for the generation fuel mix and the emissions is PJM Environmental Information Services, Inc. (www.pjm-eis.com)

ComEd Ranked Among Nation's Most Solar-Integrated Utilities

In July, the Solar Electric Power Association (SEPA) announced the results of its U.S. Utility Solar Electricity Market Survey, and listed ComEd as one of the top 10 utilities in its category for its solar electric capacity.

The first-ever survey ranked 63 U.S. electric utilities by the total amount of solar electricity installed in their service territories at the end of 2007. Among investor-owned utilities, ComEd ranked:

- 9th for its **total solar electric capacity** (MW)
- 7th in **solar electric capacity on the customer side of the meter** among investor-owned utilities (MW)
- 10th in **solar electric capacity on the customer side of the meter** among all utilities (MW)

ComEd achieved its rankings by reporting installed capacity of 2,090 kW from solar photovoltaic installations for customers throughout its Northern Illinois service territory.

"As the overall interest in the environment has increased in the past few years, we have seen an increasing interest in renewable energy from both residential and business customers of ComEd, including installing their own photovoltaic systems," said Val Jensen, vice president, marketing and environmental programs, ComEd.

Environmental Disclosure Information

Twelve Months Ending June 2008

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd’s Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

| Sources of Electricity Supplied for the 12 months ending June 30, 2008 | Percentage of Total |
|---|---------------------|
| Biomass power | 1% |
| Coal-fired power | 32% |
| Hydro power | 1% |
| Natural gas-fired power | 4% |
| Nuclear power | 58% |
| Oil-fired power | 0% |
| Solar power | 0% |
| Wind power | 1% |
| Other resources | 0% |
| Unknown resources purchased from other companies | 3% |
| TOTAL | 100% |

Sources of Electricity Supplied for the 12 months ending June 30, 2008

| AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWh) PRODUCED FROM KNOWN ³ SOURCES for the 12 months ending June 30, 2008 | |
|--|-------------------|
| Carbon dioxide | 765.44 lbs. |
| Nitrogen oxides | 1.38 lbs. |
| Sulfur dioxide | 4.27 lbs. |
| High level nuclear waste | 0.005 lbs |
| Low level nuclear waste | 0.0023 cubic feet |

³ 3% of the total electricity supplied was purchased from suppliers that did not specify the sources of generation or the amounts of emissions and amount of nuclear waste attributable to producing this electricity, thus it is not known to ComEd and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site www.icc.state.il.us.
